

HORL® Scissors
Information

15

The first of its kind.

HORL® Scissors are the first to make it possible for anyone to sharpen them at home – with a HORL® Sharpener. This will keep them razor sharp for a lifetime, over their entire length. Their sharpness is enhanced by dynamic tensioning that ensures a unique sharpness along every millimetre of the cutting edge and affords a completely new cutting experience. The scissor halves can be separated for resharpening with just one easy movement and without needing a tool. Forged at the foot of the Black Forest, HORL® Scissors are made to last.

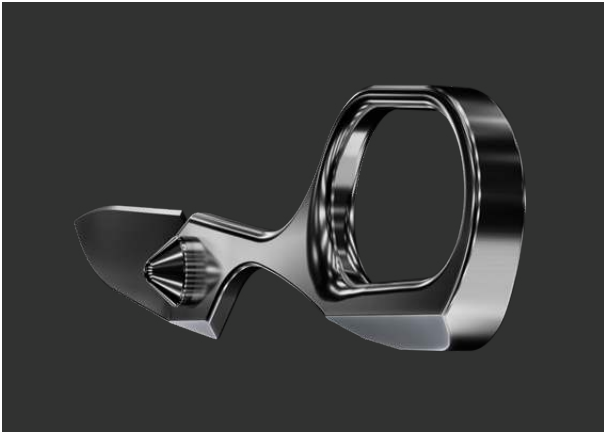

One movement. Two blades.

Thanks to their spring-loaded quick-release, you can unleash the magic of the HORL® Scissors with a single movement. After overcoming a slight resistance, the scissor halves easily separate – without needing any tools.

Two innovations made for each other.

With a HORL® Sharpener, it is in your own hands to keep your HORL® Scissors razor-sharp at all times. You can sharpen the scissor blades easily with the ceramic honing disc. For boundless sharpness with every cut.

Perfectly positioned

A technical masterpiece is integrated into the design: Thanks to three perfectly aligned contact surfaces, the halves of HORL® Scissors stand by themselves at an optimum 45° grinding angle. Without any angle support.

100% Sharpness along every millimetre

The spring-loading of the quick-release provides dynamic tensioning of the scissor blades that produces a perfect cut along their entire length. For an unmatched cutting experience, day after day.

No limit fine grinding.

The HORL® cross-hatch grind offers you a level of sharpness only previously possible with high-quality kitchen knives. You can also go even further – with our whetstones from fine to ultra-fine.

Excellence your whole life long

HORL® Scissors are made to give you a lifetime of pleasure. That's why we forge them with our regional partners – to the highest precision, with no compromise in quality and attention to every detail.
